36	Empty Request with correct input	2	42
37	Empty Request with correct input	2	43
38	Empty Request with correct input	1	44
39	Empty Request with correct input	2	45
40	Empty Request with correct input	1	46
41	Empty Request with correct input	2	47

Testing with their DB/API Installed Locally

Defect No.	Defect Description	Defect Severity	Test Case No. OR Description
------------	--------------------	-----------------	------------------------------

1	Signup with valid email and password fails.	1	35
2	Valid login cannot be tested.	1	37
3	No response on post to market. Reason being no authentication token is available as sign up is broken. Thus all of the following tests fail. Classified in one group as a Severity 1 due to the widespread failures.	1	41-47
4	Calling get all items returns an empty array object. This could foreseeably be the correct output, however it is impossible to verify without inspecting the database directly and without the ability to post a new item successfully.	1	48
